

# Assessment

The Development Project provides you with the opportunity to identify a computer-based problem that you'd be interested in solving and to produce a deliverable that solves this problem.

You will investigate the requirements and/or background to the problem, analyse the results of this investigation, and design, develop and evaluate a solution to your chosen problem using appropriate engineering approaches, tools, techniques, and methodologies.

You will critically reflect on the whole project evaluating the project's success, what you have learnt from the experience, and identifying opportunities for further work. You will also give a critical appraisal of any professional issues that are specifically related to the project.

Your work on the Development Project is assessed in two ways: an academic report that outlines the problem and approaches to address it, followed by a screencast video presentation of your solution. **To maintain academic integrity your project supervisor and/or module leader retain the right to request a viva presentation of your work after submission, failure to attend the viva or inability to answer the questions to the examiners satisfaction will result in failure of all assessed elements.**

**Before** starting any research on the Development Project you **MUST** receive ethical approval by completing the relevant UREC form, not receiving ethical approval prior to the commencement of any research will be a breach of the university's ethical guidelines and referral to an academic conduct panel.

## Assessment Brief for the Academic Report

| In this assessment are students asked to consider:                                                                                                                                                                                                                                                                                                                | Inclusivity and accessibility | Yes                                                                                             |
|                                                                                                                                                                                                                                                                                                                                                                   | Sustainability                | Yes                                                                                             |

### **Module Learning Outcomes**

- Analyse a complex problem that requires a computer-based solution.
- Synthesise key ideas from academic and practitioner literatures, placing the project in those contexts.
- Research and critically reflect on engineering approaches and technologies.
- Research, critically reflect on, clearly communicate issues relevant to ethical and professional issues

You will write a short report in the style used in academic conferences and journals. This report will include:

- An overview of what the problem is
- A comprehensive literature review
- Review of possible engineering approaches and technologies
- Discussion of ethical and professional issues

### **What to include in the report**

#### *Introduction (marking criterion 1)*

Outline what the problem is providing a robust analysis of what the issues are, the motivation for tackling this problem and the aims/objectives of the project.

#### *Literature review (marking criterion 2)*

Search the academic and commercial literature for sources of information that can help you solve the problem you have chosen. Typical sources include academic conference and journal papers, technical reports and documentation, and existing products. Analyse these sources to identify information that is relevant to your problem, such as potential solutions/approaches for your problem, then synthesise the information from your different sources to provide insights into your choices on how to solve your problem. Explain how these insights will help inform and refine any proposed solutions.

#### *Proposed solution (marking criterion 1)*

Based on the review of the literature describe your solution that addresses the problem and produce a list of project requirements/specifications that will be reviewed as part of video 1.

#### *Engineering approaches and technologies (marking criterion 3)*

Describe the chosen engineering approach and technology for your deliverable that will address the problem and requirements identified earlier. Discuss the rationale behind your choices, which should be referenced accordingly, mentioning alternative options and why these have been discounted for your project, the **reasons for which must be explicitly linked to your project** rather than a generic discussion. Engineering approaches to consider include project planning and time management, software development tools and techniques, version control, API's, IDE's, code libraries and tools used for testing.

#### *Ethical and professional issues (marking criterion 4)*

Research and identify legal, social, ethical and professional issues relevant to your problem and proposed solution, including confidentiality of any project participants or intended users of your deliverable. Discuss how these issues have influenced the design and development of your deliverable and provide detail of any risk and mitigation plans.

### *Conclusion (marking criterion 5)*

Summarising the main findings.

### *References (marking criterion 5)*

Include a full list of all the relevant sources of information you identified using the University's recommended APA referencing style. Include citations of these sources in the main part of your report to provide evidence supporting the claims made.

Note: the references section is not included in the word count for your academic report (different projects will have different numbers of sources), but citations are (because citations are part of the main body of the report).

### *What you must submit for the Academic Report*

**You must submit a word-processed document to Blackboard that adheres to WCAG accessibility standards, MS Word is one example of a tool that can be used. Any other format must include the sources used to generate such a format. Submissions that are inaccessible or unreadable will not be marked. A word limit of 3000 words  $\pm$  10% (this limit does not include the title page, references section or any appendices). If your submission exceeds this word limit, then your markers will not be able to consider content beyond the word limit of 3000 words + 10%.**

The first page must be a title page showing:

- The module name and code: Development Project 55-608850
- The title of your project
- An abstract
- Your name and student ID
- Your supervisor's name
- The word count (excluding title page and references)

Your report must meet the following quality standards:

- Your report must be word processed with appropriate section headings and default margins.
- You must use the University's recommended APA referencing style for both references and citations.

If these quality standards are not met, then your work may not effectively evidence your level of attainment which will impact your grade.

### Assessment Brief for the videos

|                                                                                                                                                                                                                                                                                                                                                                                                      |                               |                                                                                    |

| Planned feedback date:<br>21/05/2026<br>If your submission date is different to the standard submission date, for example, due to an approved extension, we will endeavour to return your feedback by the date given. However, please be aware that it may not be possible to return your feedback within the 3 week period and you may experience a short delay.                                    |                               | Mode of feedback: Blackboard<br><br>In-module retrieval available: No              |
| In this assessment are students asked to consider:                                                                                                                                                                                                                                                                                                                                                   | Inclusivity and accessibility | Yes                                                                                |
|                                                                                                                                                                                                                                                                                                                                                                                                      | Sustainability                | Yes                                                                                |
| <b>Module Learning Outcomes</b>                                                                                                                                                                                                                                                                                                                                                                      |                               |                                                                                    |
| <ul style="list-style-type: none"> <li>• Engineer and demonstrate a computer-based artefact.</li> <li>• Critically reflect on and evaluate appropriate tools and methods to the creation of a computer-based artefact.</li> <li>• Research, critically reflect on, clearly communicate issues relevant to project success, security, and aspects of personal development planning (PDP) .</li> </ul> |                               |                                                                                    |

You will record two screencast video presentations:

- A demonstration of your solution and its implementation
- A critical reflection of the deliverable and your own performance during the project

Each video should be approximately 9 minutes in duration, so long as the total duration is no more than 18 minutes  $\pm 10\%$ . To support any claims made in each video these should be supported by appropriate research and include the corresponding citation within the video, the full APA reference must be included as a footnote at the bottom of the screen or page if using slides.

### What to include in the video presentations

#### *Video 1: Demonstration of your Solution and its Implementation (marking criterion 1)*

Give a live demonstration of the deliverable you developed to solve this problem, explaining the process you have followed using your chosen software development technique and focusing on the functionality you have implemented. You should give a full overview of the implementation from the landing screen through all features and functions as if a normal user would interact with the deliverable.

Demonstrate how your deliverable meets the requirements identified in your report. Discuss your solution design using, for example, diagrams and models of architecture, databases, etc. Highlight any particularly interesting or innovative aspects of your solution, showing snippets of important parts of the code that helps demonstrate how your design choices contributes to your solution.

#### *Video 2: Critical Reflection (marking criteria 2 and 3)*

In this video you will critically reflect on the deliverable you have created and your own personal performance during the process. Using industry defined testing methods, you will establish the relative success and quality of the final deliverable, discussing relevant performance metrics or other measures to demonstrate the success (or failure) of your solution and providing a clear rationale for why you have chosen these specific testing methodologies. Where participants or other external stakeholders have been involved in the testing of the deliverable discuss their comments and feedback. As part of the critical review process you will analyse any security, sustainability, inclusivity, accessibility, ethical or professional issues.

You will reflect on your own performance, critically reviewing the appropriateness of the choices you made, your time management and project planning skills, how well you followed your chosen engineering approach, what changes had to be made during the project to address issues as they arose, and how you managed these. You will also consider what lessons have been learnt and how you would adapt your approach if undertaking a similar project in the future. A structured Personal Development Plan (PDP) that incorporates SMART goals to address skills or knowledge gaps can be incorporated.

### What you must submit for the Video Presentation

**You must submit two screencast videos to Blackboard, in MP4 format, with the running time for all videos combined adding up to no more than 18 minutes  $\pm 10\%$ . If your submission exceeds this time limit, then your markers will not be able to consider content beyond the time limit of 18 minutes + 10%.**

Each screencast video must begin with a 2 second title page showing:

- The module name and code: Development Project 55-608850
- The title of your project
- The title of the video: this should be one of “Demonstration of your Solution and its Implementation” or “Critical Reflection”

- Your name and student ID
- Your supervisor's name
- The length of this video

Your videos must meet the following quality standards:

- Each video should be an MP4 file and smaller than 250Mb in size
- Use screen recording software and not the camera on your mobile phone
- The audio track must be clearly audible
- Any code shown should be clearly readable on the screencast video, not quickly scrolling through it
- The video should not be artificially sped up, though you may want to edit out long pauses and any "ums" or "errs"

If these quality standards are not met, then your work may not effectively evidence your level of attainment which will impact your grade.

| <b>Criterion 4: Research, critically reflect on, clearly communicate issues relevant to ethical and professional issues (15%)</b>   | No discussion of professional or ethical concerns.                                                                         | Professional and ethical considerations are weak and come across as an afterthought.                        | Professional and ethical considerations are treated more seriously and do not come across as an afterthought, but they are not related back to project examples.        | Professional and ethical considerations are treated more seriously and their impact on the project is made clear with some effective examples.                                      | Very good discussions of professional and ethical issues will influence decisions taken and the impact they will have on the project has been considered with appropriate examples and some consideration of mitigations | Excellent discussion of how Professional and ethical concerns will influence decisions taken throughout the project with relevant and clear examples. A thorough plan of risk and mitigation plans has been created. |
| <b>Criterion 5: Summarise key findings with a robust conclusion that is presented and referenced in a professional manner (10%)</b> | Very little or no conclusion, poor layout with many errors easily picked up by spell checkers. Incorrect or no references. | Conclusion is partially consistent with the research, multiple spelling, formatting and referencing errors. | Conclusion is linked to the research but insufficient detail. All parts of report included but poor presentation and basic use of English. Some attempt at referencing. | Clear justification given for the conclusion that brings together the different sections of the report. Simple but clear structure, good use of English and referenced accordingly. | Conclusion is explicitly justified by the research and provides a concise summary. Good presentation, correct and effective use of English all referenced in the APA standard                                            | The argument for the conclusion is clearly stated and fully justified. Innovative presentation, highlighting structure of report. Excellent use of English with an extensive range of references.                    |

## Artificial Intelligence and Academic Integrity – AI&AI

It is important that if you use AI tools to generate an assignment that you do not submit it as if it were your own work. You must check the AI Transparency Scale (AITS) to determine what level of AI use is allowed.

Our regulations state:

Contract cheating/concerns over authorship: This form of misconduct involves another person (or artificial intelligence) creating the assignment which you then submit as your own. Examples of this sort of misconduct include: buying an assignment from an ‘essay mill’/professional writer; submitting an assignment which you have downloaded from a file-sharing site; acquiring an essay from another student or family member and submitting it as your own; attempting to pass off work created by artificial intelligence as your own. These activities show a clear intention to deceive the marker and are treated as misconduct.

Further guidance is available here: <https://blogs.shu.ac.uk/assessment4students/preparing-to-submit-work/#AI>

### AI Transparency Scale (AITS)

For this assessment, the maximum permitted use of Artificial Intelligence is highlighted in the table below. All students are required to include a transparency declaration statement which can be added as an appendix to the assessment (not included in the word count)

| SHU AI Transparency Scale (AITS) |                   |                                                                              |                                                                                                                                                                                 |                                                                                                                                                                     |

| 1                                | No AI             | Artificial Intelligence (AI) has not been used for any part of the activity. | AI is not used for any part of the activity.                                                                                                                                    | All aspects of the activity are human generated, created, edited, and developed.                                                                                    |
| 2                                | AI for Shaping    | AI has been used to shape the initial and/or final parts of the activity.    | AI is used for shaping parts of the activity. This includes initial outlining, concept development, prompting thinking, and/or improving structure/quality of the final output. | Most of the activity is human developed/generated. AI ideas and suggestions are refined and reviewed. AI outputs are used for discrete and specific goals/outcomes. |
| 3                                | AI for Developing | AI has been directed for enhanced development of concepts and outputs.       | AI is used to undertake detailed development of many or most aspects of an activity and outputs of that activity.                                                               | The human takes a significant role in the enhancement, refinement, and critical review of AI generated elements, combining or curating for any outputs.             |
| 4                                | AI for Enhancing  | AI has been implemented for all elements of the task.                        | AI is used extensively throughout the task to achieve goals and                                                                                                                 | The human directs the use of AI for effective outcomes within an                                                                                                    |

|   |                   |                                                                                                                                                       |                                                                                             |                                                                                                                                                                       |
|---|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|   |                   |                                                                                                                                                       | outcomes.                                                                                   | activity. Critical thinking is evidenced for any outputs.                                                                                                             |
| 5 | AI for Innovating | AI has been used for all elements of a task or piece of work, and it has been used in new, creative, and innovative ways through advanced techniques. | AI is implemented in an advanced and innovative way throughout all aspects of the activity. | AI is used creatively and critically by the human. The human uses AI as a co-creator with a critical thinking approach to generating novel AI activities and outputs. |

### Transparency declaration statements

Your statement should:

- Indicate the AITS descriptor you are using.
- Briefly describe how AI was used (if applicable) or confirm no AI was used.

Please include this statement as an appendix in your assessment. Failure to comply with this requirement may be considered a breach of academic integrity under our Academic Conduct Policy.

**NOTE:** This only refers to the use of generative AI, should the primary focus of your project be on AI then a different AITS will apply, you must discuss this with your project supervisor and document this accordingly within your report.

### University Grade Descriptor (UGD)

As well as assessing your work against the module learning outcomes and assessment criteria above, your marker will use the guidance below to award the final grade for your work. These descriptors also provide you with more general guidance to improve your mark.

| Class           | Category        | Mark range | %  | General Characteristics                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 1 <sup>st</sup> | Exceptional 1st | 93 - 100   | 96 | Exceptional breadth and depth of knowledge and understanding of the area of study, significantly beyond what has been taught in all areas; evidence of extensive and appropriate selection and critical evaluation/synthesis/analysis and of reading/research beyond the prescribed range, in both breadth and depth, to advance work/direct arguments; excellent communication; performance deemed to be beyond expectation. Work at publishable or commercial standard. The ability to make decisions and systematically carry out tasks/processes with autonomy in unpredictable situations; exercise of initiative in the completion of |

|                 |          |         |    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------|----------|---------|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |          |         |    | practical tasks; exceptional leadership skills and evidence of personal responsibility in group contexts; creative flair; extremely well-developed problem-solving skills; the ability to carry out sustained critical reflection on practical work within the wider context of industry/workplace. Exceeds expectations set by the industry/employment context.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1 <sup>st</sup> | High 1st | 85 - 92 | 89 | Excellent knowledge and understanding of the area of study as the student is typically able to go beyond what has been taught (particularly for a mid/high 1st); evidence of extensive and appropriate selection and critical evaluation/synthesis/analysis of reading/research beyond the prescribed range, to advance work/direct arguments; excellent communication; performance deemed beyond expectation of the level. The ability to make decisions and carry out tasks/processes with a high level of autonomy; creative flair and the ability to (re)interpret predefined rules/conventions to select and justify individual working practice; excellent problem-solving skills; accuracy and fluency; excellent command of skills appropriate to the task; the ability to reflect critically on practical work within the wider context of industry/workplace. Meets expectations set by the industry/employment context. |
|                 | Mid 1st  | 78 - 84 | 81 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                 | Low 1st  | 70 - 77 | 74 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2.1             | High 2.1 | 67 - 69 | 68 | Very good knowledge and understanding of the area of study as the student is typically able to relate facts/concepts together with some ability to apply to known/taught contexts; evidence of appropriate selection and critical evaluation of reading/research, some beyond the prescribed range, may rely on set sources to advance work/direct arguments; demonstrates autonomy in approach to learning; strong communication skills. Broadly autonomous completion of practical tasks/processes; ability to adapt in response to change or unexpected experiences; technical/artistic decision making is very highly developed; a clear command of the skills relevant to the task/process; ability to reflect on practical work and set future goals within the wider context of industry/workplace. Adherence to standards set by the industry/employment context.                                                          |
